

ForensicBench

Can an LLM agent uncover fraud hidden inside a company's accounting ledger?

1 The data

Energy

Health

Luxury

Mfg.

Transport

Realistic accounting ledger

~300k journal entries · 3 years
vendors · payroll · sales · inventory

one ledger per sector · just like
a real company's books

Real fraud hidden inside

a few hundred entries, unlabelled

2 The task

The agent investigates

explores the ledger with SQL + code,
follows the money, builds hypotheses

... and flags 5 fraud schemes

- ✓ Fake vendor payments
- ✓ Revenue manipulation
- ✓ Vendor kickbacks / collusion
- ✓ Ghost employees on payroll
- ✓ Inventory theft / manipulation

3 The score

Compare to the answer key

the agent never sees the labels —
findings are matched to known fraud

How good was it?

Caught the fraud? (**Recall**)

Flags were right? (**Precision · F1**)

Right kind of fraud? (**Type-F1**)

Whole scheme caught? (**Coverage**)

Stable across runs? (**Consistency**)

The harness repeats this across 12 open-weight LLMs × 5 sectors to build the leaderboard.
